

Granular, Scalable, Distributed Content Management

Granola is a **Content Management System** used to create, manage and deploy content across every level of a large enterprise, or small business. Granola can be used for simple web site management or for a complete document management solution. Features include:

- Revision Control
- Access Control Lists
- User and Group management
- Remote publishing
- Support for dynamic languages (PHP, Python, Perl, ASP.Net)
- And More...

At [Duncan Ingram, Inc.](#) we use Granola in all of our CMS work, alongside packages like Joomla! and Wordpress.
